## Package 'censobr'

February 28, 2025

Type Package

Title Download Data from Brazil's Population Census

Version 0.4.1

Description Easy access to data from Brazil's population censuses. The package provides a simple and efficient way to download and read the data sets and the documentation of all the population censuses taken in and after 1960 in the country. The package is built on top of the 'Arrow' platform <https://arrow.apache.org/docs/r/>, which allows users to work with larger-than-memory census data using 'dplyr' familiar functions. <https://arrow.apache.org/docs/r/articles/arrow.html# analyzing-arrow-data-with-dplyr>.

## Index

censobr\_cache Manage cached files from the censobr package

## Description

Manage cached files from the censobr package

#### Usage

censobr\_cache(list\_files = TRUE, delete\_file = NULL)

#### Arguments

list_files	Logical. Whether to print a message with the address of all censobr data sets cached locally. Defaults to TRUE.
delete_file	String. The file name (basename) of a censobr data set cached locally that should be deleted. Defaults to NULL, so that no file is deleted. If delete_file = "all", then all cached censobr files are deleted.

## Value

A message indicating which file exist and/or which ones have been deleted from local cache directory.

## See Also

Other Cache data: set\_censobr\_cache\_dir()

## data\_dictionary

## Examples

```
# list all files cached
censobr_cache(list_files = TRUE)
# delete particular file
censobr_cache(delete_file = '2010_deaths')
```

data\_dictionary Data dictionary of Brazil's census data

## Description

Open on a browser the data dictionary of Brazil's census data.

#### Usage

data\_dictionary(year = 2010, dataset = NULL, showProgress = TRUE, cache = TRUE)

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
dataset	Character. The dataset of data dictionary to be opened. Options include c("population", "households", "families", "mortality", "emigration", "tracts").
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

Returns NULL and opens .html or .pdf file on the browser

## See Also

Other Census documentation: interview\_manual()

## Examples

interview\_manual Interview manual of the data collection of Brazil's censuses

#### Description

Open on a browser the interview manual of the data collection of Brazil's censuses

## Usage

```
interview_manual(year = NULL, showProgress = TRUE, cache = TRUE)
```

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

Opens a .pdf file on the browser

#### See Also

Other Census documentation: data\_dictionary()

## questionnaire

## Examples

```
# Open interview manual on browser
interview_manual(year = 2010, showProgress = FALSE)
```

questionnaire Questionnaires used in the data collection of Brazil's censuses

## Description

Open on a browser the questionnaire used in the data collection of Brazil's censuses

#### Usage

```
questionnaire(year = 2010, type = NULL, showProgress = TRUE, cache = TRUE)
```

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
type	Character. The type of questionnaire used in the survey, whether the "long" one used in the sample component of the census, or the "short" one, which is answered by more households. Options include c("long", "short").
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

## Value

Opens a .pdf file on the browser

## Examples

```
library(censobr)
```

```
# Open questionnaire on browser
questionnaire(year = 2010, type = 'long', showProgress = FALSE)
```

read\_emigration

## Description

Download microdata of emigration records from Brazil's census. Data collected in the sample component of the questionnaire.

## Usage

```
read_emigration(
  year = 2010,
  columns = NULL,
  add_labels = NULL,
  merge_households = FALSE,
  as_data_frame = FALSE,
  showProgress = TRUE,
  cache = TRUE
)
```

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
columns	String. A vector of column names to keep. The rest of the columns are not read. Defaults to NULL and read all columns.
add_labels	Character. Whether the function should add labels to the responses of categori- cal variables. When add_labels = "pt", the function adds labels in Portuguese. Defaults to NULL.
merge_household	S
	Logical. Indicate whether the function should merge household variables to the output data. Defaults to FALSE.
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

An arrow Dataset or a "data.frame" object.

## read\_families

#### See Also

Other Microdata: read\_families(), read\_households(), read\_mortality(), read\_population()

#### Examples

read\_families

Download microdata of family records from Brazil's census

## Description

Download microdata of family records from Brazil's census. Data collected in the sample component of the questionnaire.

## Usage

```
read_families(
   year = 2000,
   columns = NULL,
   add_labels = NULL,
   as_data_frame = FALSE,
   showProgress = TRUE,
   cache = TRUE
)
```

#### Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2000.
columns	String. A vector of column names to keep. The rest of the columns are not read. Defaults to NULL and read all columns.
add_labels	Character. Whether the function should add labels to the responses of categori- cal variables. When add_labels = "pt", the function adds labels in Portuguese. Defaults to NULL.
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.

showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

## Value

An arrow Dataset or a "data.frame" object.

## See Also

Other Microdata: read\_emigration(), read\_households(), read\_mortality(), read\_population()

## Examples

read\_households Download microdata of household records from Brazil's census

## Description

Download microdata of household records from Brazil's census. Data collected in the sample component of the questionnaire.

## Usage

```
read_households(
  year = 2010,
  columns = NULL,
  add_labels = NULL,
  as_data_frame = FALSE,
  showProgress = TRUE,
  cache = TRUE
)
```

#### Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
columns	String. A vector of column names to keep. The rest of the columns are not read. Defaults to NULL and read all columns.
add_labels	Character. Whether the function should add labels to the responses of categori- cal variables. When add_labels = "pt", the function adds labels in Portuguese. Defaults to NULL.
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

An arrow Dataset or a "data.frame" object.

#### 1960 Census

The 1960 microdata version available in **censobr** is a combination of two versions of the Demographic Census sample. The 25% sample data from the 1960 Census was never fully processed by IBGE - several states did not have their questionnaires digitized. Currently, this dataset only has data from 16 states of the Federation (and from a contested border region between Minas Gerais and Espirito Santo called Serra dos Aimores). Information is missing for the states of the former Northern Region, Maranhão, Piaui, Guanabara, Santa Catarina, and Espírito Santo. In 1965, IBGE decided to draw a probabilistic sub-sample of approximately 1.27% of the population, including all units of the federation. With this data, IBGE produced several official reports at the time. The data from **censobr** is the combination of these two datasets.

We pre-processed the 1.27% sample data to ensured data consistency, given the original data was partially corrupted. We also created a sample weight variable to correct for unbalanced data and to expand te sample to the total population. For the data from the 25% sample, the weights expand to the municipal totals. Meanwhile, for the data from the 1.27% sample, the weights expand to the state totals. Additionally, we constructed a few variables that allow for the approximate incorporation of the complex sample design, enabling the proper calculation of standard errors and confidence intervals.

You can read more about the 1960 Census and find a thorough documentation of how this dataset was processed on this link https://github.com/antrologos/ConsistenciaCenso1960Br.

#### See Also

Other Microdata: read\_emigration(), read\_families(), read\_mortality(), read\_population()

## Examples

read\_mortality Download microdata of death records from Brazil's census

## Description

Download microdata of death records from Brazil's census. Data collected in the sample component of the questionnaire.

## Usage

```
read_mortality(
   year = 2010,
   columns = NULL,
   add_labels = NULL,
   merge_households = FALSE,
   as_data_frame = FALSE,
   showProgress = TRUE,
   cache = TRUE
)
```

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
columns	String. A vector of column names to keep. The rest of the columns are not read. Defaults to NULL and read all columns.
add_labels	Character. Whether the function should add labels to the responses of categori- cal variables. When add_labels = "pt", the function adds labels in Portuguese. Defaults to NULL.
merge_household	
	Logical. Indicate whether the function should merge household variables to the output data. Defaults to FALSE.
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

## read\_population

## Value

An arrow Dataset or a "data.frame" object.

## See Also

Other Microdata: read\_emigration(), read\_families(), read\_households(), read\_population()

## Examples

```
library(censobr)
```

```
# dplyr::glimpse(df)
```

read\_population Download microdata of population records from Brazil's census

## Description

Download microdata of population records from Brazil's census. Data collected in the sample component of the questionnaire.

#### Usage

```
read_population(
  year = 2010,
  columns = NULL,
  add_labels = NULL,
  as_data_frame = FALSE,
  showProgress = TRUE,
  cache = TRUE
)
```

#### Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
columns	String. A vector of column names to keep. The rest of the columns are not read. Defaults to NULL and read all columns.
add_labels	Character. Whether the function should add labels to the responses of categori- cal variables. When add_labels = "pt", the function adds labels in Portuguese. Defaults to NULL.
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

An arrow Dataset or a "data.frame" object.

#### 1960 Census

The 1960 microdata version available in **censobr** is a combination of two versions of the Demographic Census sample. The 25% sample data from the 1960 Census was never fully processed by IBGE - several states did not have their questionnaires digitized. Currently, this dataset only has data from 16 states of the Federation (and from a contested border region between Minas Gerais and Espirito Santo called Serra dos Aimores). Information is missing for the states of the former Northern Region, Maranhão, Piaui, Guanabara, Santa Catarina, and Espírito Santo. In 1965, IBGE decided to draw a probabilistic sub-sample of approximately 1.27% of the population, including all units of the federation. With this data, IBGE produced several official reports at the time. The data from **censobr** is the combination of these two datasets.

We pre-processed the 1.27% sample data to ensured data consistency, given the original data was partially corrupted. We also created a sample weight variable to correct for unbalanced data and to expand te sample to the total population. For the data from the 25% sample, the weights expand to the municipal totals. Meanwhile, for the data from the 1.27% sample, the weights expand to the state totals. Additionally, we constructed a few variables that allow for the approximate incorporation of the complex sample design, enabling the proper calculation of standard errors and confidence intervals.

#### See Also

Other Microdata: read\_emigration(), read\_families(), read\_households(), read\_mortality()

## read\_tracts

## Examples

read\_tracts

Download census tract-level data from Brazil's censuses

## Description

Download census tract-level aggregate data from Brazil's censuses.

## Usage

```
read_tracts(
  year = 2010,
  dataset = NULL,
  as_data_frame = FALSE,
  showProgress = TRUE,
  cache = TRUE
)
```

## Arguments

year	Numeric. Year of reference in the format yyyy. Defaults to 2010.
dataset	Character. The dataset to be opened. Options currently include c("Basico", "Domicilio", "DomicilioRenda", "Responsavel", "ResponsavelRenda", "Pessoa", "PessoaRenda", "Entorno"). Preliminary results of the 2022 census are avail- able with "Preliminares".
as_data_frame	Logical. When FALSE (Default), the function returns an Arrow Dataset, which allows users to work with larger-than-memory data. If TRUE, the function returns data.frame.
showProgress	Logical. Defaults to TRUE display download progress bar. The progress bar only reflects only the downloading time, not the time to load the data to memory.
cache	Logical. Whether the function should read the data cached locally, which is much faster. Defaults to TRUE. The first time the user runs the function, censobr will download the file and store it locally so that the file only needs to be download once. If FALSE, the function will download the data again and overwrite the local file.

#### Value

An arrow Dataset or a "data.frame" object.

#### Examples

library(censobr)

set\_censobr\_cache\_dir Set custom cache directory for censobr files

#### Description

Set custom directory for caching files from the censobr package. If users want to set a custom cache directory, the function needs to be run again in each new R session.

#### Usage

```
set_censobr_cache_dir(path = NULL)
```

#### Arguments

path String. The path to an existing directory. It defaults to path = NULL, to use the default directory

#### Value

A message indicating the directory where censobr files are cached.

#### See Also

```
Other Cache data: censobr_cache()
```

#### Examples

```
# Set custom cache directory
tempd <- tempdir()
set_censobr_cache_dir(path = tempd)
# back to default path
set_censobr_cache_dir(path = NULL)</pre>
```
