

Package ‘RISmed’

October 12, 2022

Version 2.3.0

Type Package

Title Download Content from NCBI Databases

Date 2021-07-02

Depends R (>= 3.6.0), methods

Imports httr, xml2

Description A set of tools to extract bibliographic content from the National Center for Biotechnology Information (NCBI) databases, including PubMed. The name RISmed is a portmanteau of RIS (for Research Information Systems, a common tag format for bibliographic data) and PubMed.

License GPL (>= 2)

LazyData true

NeedsCompilation no

Author Stephanie Kovalchik [aut, cre]

Maintainer Stephanie Kovalchik <s.a.kovalchik@gmail.com>

RISmed-package	<i>Download content from NCBI databases.</i>
----------------	--

Description

Download content from NCBI databases. This package is intended to facilitate analyses of NCBI database content. This package is not intended for reference management.

Details

Package:	RISmed
Type:	Package
Version:	2.1.3
Date:	2014-7-20
License:	GPL (>=2)
LazyLoad:	yes

Note on usage:

In order not to overload the E-utility servers, NCBI recommends that users post no more than three URL requests per second and limit large jobs to either weekends or between 9:00 PM and 5:00 AM Eastern time during weekdays. Failure to comply with this policy may result in an IP address being blocked from accessing NCBI.

AbstractText *Extracts AbstractText from Medline object.*

Description

Extractor for the AbstractText of a Medline object.

Usage

```
AbstractText(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
AbstractText(myeloma)
```

AbstractText-methods *~~ Methods for Function AbstractText in Package **RISmed** ~~*

Description

*~~ Methods for function AbstractText in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

Affiliation *Extracts Affiliation from Medline object.*

Description

Extractor for the Affiliation of a Medline object.

Usage

```
Affiliation(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
Affiliation(myeloma)
```

Affiliation-methods *~~ Methods for Function Affiliation in Package **RISmed** ~~*

Description

*~~ Methods for function Affiliation in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

ArticleId	<i>Extracts ArticleId from Medline object.</i>
-----------	--

Description

Extractor for the ArticleId of a Medline object.

Usage

```
ArticleId(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
ArticleId(myeloma)
```

ArticleId-methods	<i>~~ Methods for Function ArticleId in Package RISmed ~~</i>
-------------------	--

Description

*~~ Methods for function ArticleId in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

ArticleTitle *Extracts ArticleTitle from Medline object.*

Description

Extractor for the ArticleTitle of a Medline object.

Usage

```
ArticleTitle(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
ArticleTitle(myeloma)
```

ArticleTitle-methods *~~ Methods for Function ArticleTitle in Package RISmed ~~*

Description

~~ Methods for function ArticleTitle in package RISmed ~~

Methods

```
signature(object = "Medline")
```

Author *Extracts Author from Medline object.*

Description

Extractor for the Author of a Medline object.

Usage

Author(object)

Arguments

object instance of class Medline

Value

List by Pubmed article. Each list contains a data frame with CollectiveName, LastName, ForeName, Initials, and order of article authors.

See Also

[Medline](#)

Examples

```
data(myeloma)
Author(myeloma)
```

Author-methods *~~ Methods for Function Author in Package **RISmed** ~~*

Description

*~~ Methods for function Author in package **RISmed** ~~*

Methods

signature(object = "Medline") List by Pubmed article. Each list contains a data frame with LastName, ForeName, Initials, and order of article authors.

c,Medline-method	<i>Concatenate Medline</i>
------------------	----------------------------

Description

Concatenates multiple Medline objects

Usage

```
## S4 method for signature 'Medline'  
c(x, ...)
```

Arguments

x	a Medline object
...	Additional Medline objects to concatenate

Value

A Medline object

Citations	<i>List of citing article titles where listed in PubMed.</i>
-----------	--

Description

Retrieves the number of citations in PubMed Central for the articles contained in the Medline object.

Usage

```
Citations(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

See Also

[Medline](#)

Citations-methods *~~ Methods for Function Citations in Package **RISmed** ~~*

Description

~~ Methods for function Citations in package **RISmed** ~~

Methods

signature(object = "Medline")

COIStatement *Extracts COIStatement from Medline object.*

Description

Extractor for the COIStatement of a Medline object.

Usage

COIStatement(object)

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

COIStatement-methods *~~ Methods for Function COIStatement in Package **RISmed** ~~*

Description

~~ Methods for function COIStatement in package **RISmed** ~~

Methods

signature(object = "Medline")

CopyrightInformation *Extracts CopyrightInformation from Medline object.*

Description

Extractor for the CopyrightInformation of a Medline object.

Usage

```
CopyrightInformation(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
CopyrightInformation(myeloma)
```

CopyrightInformation-methods

*~~ Methods for Function CopyrightInformation in Package
RISmed ~~*

Description

~~ Methods for function CopyrightInformation in package RISmed ~~

Methods

```
signature(object = "Medline")
```

Country	<i>Extracts Country from Medline object.</i>
---------	--

Description

Extractor for the Country of a Medline object.

Usage

```
Country(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)  
Country(myeloma)
```

Country-methods	<i>~~ Methods for Function Country in Package RISmed ~~</i>
-----------------	--

Description

*~~ Methods for function Country in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayAccepted	<i>Extracts DayAccepted from Medline object.</i>
-------------	--

Description

Extractor for the DayAccepted of a Medline object. This date corresponds to the date the article was accepted.

Usage

```
DayAccepted(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

[Medline](#)

Examples

```
data(myeloma)
DayAccepted(myeloma)
```

DayAccepted-methods *~~ Methods for Function DayAccepted in Package RISmed ~~*

Description

~~ Methods for function DayAccepted in package RISmed ~~

Methods

```
signature(object = "Medline")
```

DayArticleDate *Extracts DayArticleDate from Medline object.*

Description

Extractor for the DayArticleDate of a Medline object. This date corresponds to the date the article was ArticleDate.

Usage

```
DayArticleDate(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

[Medline](#)

Examples

```
data(myeloma)

*~~ Methods for Function DayArticleDate in Package **RISmed** ~~*

Description

*~~ Methods for function DayArticleDate in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayEntrez	<i>Extracts DayEntrez from Medline object.</i>
-----------	--

Description

Extractor for the DayEntrez of a Medline object. This date corresponds to the date the article was ArticleDate.

Usage

```
DayEntrez(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

-------------------	--

Description

*~~ Methods for function DayEntrez in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayEpublish	<i>Extracts DayEpublish from Medline object.</i>
-------------	--

Description

Extractor for the DayEpublish of a Medline object. This date corresponds to the date the article was published online.

Usage

```
DayEpublish(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

Description

~~ Methods for function DayEpublish in package RISmed ~~

Methods

```
signature(object = "Medline")
```

DayMedline	<i>Extracts DayMedline from Medline object.</i>
------------	---

Description

Extractor for the DayMedline of a Medline object. This date corresponds to the date the article was ArticleDate.

Usage

```
DayMedline(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

Description

*~~ Methods for function DayMedline in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayPmc	<i>Extracts DayPmc from Medline object.</i>
--------	---

Description

Extractor for the DayPmc of a Medline object. This date corresponds to the date the article was made available through Pubmed Central.

Usage

```
DayPmc(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

Description

*~~ Methods for function DayPmc in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayPublish	<i>Extracts DayPublish from Medline object.</i>
------------	---

Description

Extractor for the DayPublish of a Medline object. This date corresponds to the date the article was published in print.

Usage

```
DayPublish(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

Description

*~~ Methods for function DayPublish in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayPubDate	<i>Extracts DayPubDate from Medline object.</i>
------------	---

Description

Extractor for the DayPubDate of a Medline object. This date corresponds to the date the article was PubDate.

Usage

```
DayPubDate(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

Description

*~~ Methods for function DayPubDate in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

DayPubmed	<i>Extracts DayPubmed from Medline object.</i>
-----------	--

Description

Extractor for the DayPubmed of a Medline object. This date corresponds to the date the article was made available through Pubmed Central.

Usage

```
DayPubmed(object)
```

Arguments

object instance of class Medline

Value

vector

References

Methods

```
signature(object = "Medline")
```

DayReceived	<i>Extracts DayReceived from Medline object.</i>
-------------	--

Description

Extractor for the DayReceived of a Medline object. This date corresponds to the date the article was received.

Usage

```
DayReceived(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

Methods

```
signature(object = "Medline")
```

DayRevised	<i>Extracts DayRevised from Medline object.</i>
------------	---

Description

Extractor for the DayRevised of a Medline object. This date corresponds to the date the article was Revised.

Usage

```
DayRevised(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

Methods

```
signature(object = "Medline")
```

EUtilsGet*Results of an NCBI EUtils query*

Description

Download results of a query for any database of the National Center for Biotechnology Information (NCBI).

Usage

```
EUtilsGet(x, type="efetch", db="pubmed")
```

Arguments

x	Either vector of NCBI records ids, i.e. returned ids from EUtilsSummary, or the EUtilsSummary object itself
type	string indicating type of NCBI Eutility, efetch, esummary, etc.
db	string indicating the NCBI database used in query

Details

Possible E-utilities to supply to type are efetch, esummary, and elink.

The database name supplied to db can be any valid Entrez database, such as pubmed, protein, nlm, etc.

For further details on available E-utilities and databases visit <https://www.ncbi.nlm.nih.gov/books/NBK25499/>.

Note on usage:

In order not to overload the E-utility servers, NCBI recommends that users post no more than three URL requests per second and limit large jobs to either weekends or between 9:00 PM and 5:00 AM Eastern time during weekdays. Failure to comply with this policy may result in an IP address being blocked from accessing NCBI.

Value

For queries to PubMed, a list by article, with named vectors for each field of the article result.

For all other database, a list of the XML tree structure used where XML output is available in E-Utils.

[EUtilsSummary](#)

EUtilsQuery

Construct URL to make NCBI EUtils query

Description

Construct a URL query for any database of the National Center for Biotechnology Information (NCBI).

Usage

EUtilsQuery(query, type="esearch", db="pubmed", ...)

Arguments

query	string query as given in NCBI search box
type	string indicating type of NCBI Eutility
db	string indicating the NCBI database used in query
...	additional limits added to query

Details

Possible E-utilities to supply to type are einfo, esearch, epost, esummary, elink, equery, espell.

The database name supplied to db can be any valid Entrez database, such as pubmed, protein, nlm, etc.

For further details on available E-utilities and databases visit <https://www.ncbi.nlm.nih.gov/books/NBK25499/>.

Limits that can be supplied to ... to refine the query include:

reldate	Limits search results to be within the specified number of days from current date.
mindate	Minimum of date range for search results (examples: 2002; 2002/01/01); must be supplied with maxdate.
maxdate	Maximum of date range for search results; must be supplied with mindate.
datatype	Which date field to use in setting date limits. Possible choices are edat, Entrez date, which is the date article was published.
retstart	Where in the sequence of returned results to begin retrieving, default is 0.
retmax	Maximum number of records to retrieve, default is 1000.

Value

String URL to access NCBI E-utility.

Author(s)

Stephanie Kovalchik <s.a.kovalchik@gmail.com>

References

Query help:

<https://www.ncbi.nlm.nih.gov/books/NBK3827/>

MEDLINE/PubMed Field Descriptions

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html>

Examples

```
# PUBMED QUERY
EUtilsQuery("myeloma[ti] jones[au]")

# RESTRICT TO RECORDS WITHIN LAST 30 days
EUtilsQuery("myeloma[ti] jones[au]",reldat=30)
```

EUtilsSummary

Get summary of NCBI EUtils query

Description

Get summary information on the results of a query for any database of the National Center for Biotechnology Information (NCBI).

Usage

```
EUtilsSummary(query, type="esearch", db="pubmed", url=NULL, encoding="unknown", ...)
```

Arguments

query	string query as given in NCBI search box
type	string indicating type of NCBI Eutility
db	string indicating the NCBI database used in query
url	string of url to bypass query construction
encoding	encoding to be assumed for input strings, see readLines
...	additional limits added to query

Details

Possible E-utilities to supply to type are einfo, esearch, epost, esummary, elink, egquery, espell.

The database name supplied to db can be any valid Entrez database, such as pubmed, protein, nlm, etc.

For further details on available E-utilities and databases visit <https://www.ncbi.nlm.nih.gov/books/NBK25499/>.

Limits that can be supplied to . . . to refine the query include:

reldate	Limits search results to be within the specified number of days from current date.
mindate	Minimum of date range for search results (examples: 2002; 2002/01/01); must be supplied with maxdate.
maxdate	Maximum of date range for search results; must be supplied with mindate.
datetype	Which date field to use in setting date limits. Possible choices are edat, Entrez date, which is the date article was
retstart	Where in the sequence of returned results to begin retrieving, default is 0.
retmax	Maximum number of records to retrieve, default is 1000.

Value

Returns an EUtilsSummary object.

[EUtilsQuery](#)

EUtilsSummary-class *Class "EUtilsSummary"*

Description

Summary of query of an NCBI E-utility

Objects from the Class

Objects can be created by calls of the form `new("EUtilsSummary", ...)`.

Slots

db: Name of database
count: total ids
retmax: limit on number of records to return
retstart: numeric indicating where return records start
PMID: character vector of matching ids
querytranslation: character of NCBI translation of query

Methods

QueryCount signature(object = "EUtilsSummary"): ...
QueryId signature(object = "EUtilsSummary"): ...
print signature(x = "EUtilsSummary"): ...
show signature(object = "EUtilsSummary"): ...
summary signature(object = "EUtilsSummary"): ...
QueryTranslation signature(object = "EUtilsSummary"): ...

Medline-class *Class "Medline"*

Description

Class for Medline citation of query to PubMed.

Objects from the Class

Objects can be created by calls of the form `new("Medline", ...)`.

Slots

Unless stated otherwise, each of the components is a vector of the given field where each element corresponds to a PubMed article.

MedlinePgn	<i>Extracts MedlinePgn from Medline object.</i>
------------	---

Description

Extractor for the MedlinePgn of a Medline object.

Usage

```
MedlinePgn(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
MedlinePgn(myeloma)
```

MedlinePgn-methods	<i>~~ Methods for Function MedlinePgn in Package RISmed ~~</i>
--------------------	---

Description

*~~ Methods for function MedlinePgn in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

MedlineTA	<i>Extracts MedlineTA from Medline object.</i>
-----------	--

Description

Extractor for the MedlineTA of a Medline object.

Usage

```
MedlineTA(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

Methods

```
signature(object = "Medline")
```

Mesh	<i>Extracts Mesh headings from Medline object.</i>
------	--

Description

Extractor for the Mesh headings of a Medline object.

Usage

Mesh(object)

Arguments

object instance of class Medline

Details

In Process and publisher-supplied records lack MeSH terms. See the MeSH home page <https://www.nlm.nih.gov/mesh/meshhome.html> for additional information about MeSH. Note that more recent records may lack MeSH headings.

Value

List by Pubmed article. Each list contains a data frame with Heading and Type. The Heading is a MeSH Term and Type is either a Descriptor or a Qualifier of a Descriptor term. Qualifiers of a Descriptor immediately follow the Descriptor term in the data frame. When MeSH headings have not been included with a MEDLINE record, the list will contain NAs (see details).

signature(object = "Medline")
```

MonthReceived	<i>Extracts MonthReceived from Medline object.</i>
---------------	--

Description

Extractor for the MonthReceived of a Medline object. This date corresponds to the date the article was received.

Usage

```
MonthReceived(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

MonthReceived-methods *~~ Methods for Function MonthReceived in Package RISmed ~~*

Description

~~ Methods for function MonthReceived in package RISmed ~~

Methods

```
signature(object = "Medline")
```

MonthRevised	<i>Extracts MonthRevised from Medline object.</i>
--------------	---

Description

Extractor for the MonthRevised of a Medline object. This date corresponds to the date the article was Revised.

Usage

```
MonthRevised(object)
```

Arguments

object	instance of class Medline
--------	---------------------------

Value

vector

References

Methods

```
signature(object = "Medline")
```

myeloma

Example of results from EUtilsGet

Description

First five records of query of NCBI PubMed for "myeloma[MeSh]" in the past year (at the time of this writing) as a Medline object.

Usage

myeloma

Format

A list object with five PubMed article records.

Author(s)

Stephanie Kovalchik <s.a.kovalchik@gmail.com>

Source

PubMed database of the US National Library of Medicine

See Also

[EUtilsGet,Medline](#)

NlmUniqueID

Extracts NlmUniqueID from Medline object.

Description

Extractor for the NlmUniqueID of a Medline object.

Usage

NlmUniqueID(object)

Arguments

object instance of class Medline

Value

vector

See Also[Medline](#)**Examples**

```
data(myeloma)
NlmUniqueID(myeloma)
```

NlmUniqueID-methods *~~ Methods for Function NlmUniqueID in Package **RISmed** ~~*

Description

*~~ Methods for function NlmUniqueID in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

PMID	<i>Extracts PMID from Medline object.</i>
------	---

Description

Extractor for the PMID of a Medline object.

Usage

```
PMID(object)
```

Arguments

object instance of class Medline

Value

vector

See Also[Medline](#)**Examples**

```
data(myeloma)
PMID(myeloma)
```

PMID-methods *~~ Methods for Function PMID in Package **RISmed** ~~*

Description

~~ Methods for function PMID in package **RISmed** ~~

Methods

signature(object = "Medline")

print-Medline *Print method for Medline object*

Description

Print object of class Medline

Methods

signature(object = "Medline") Query translation (if provided) and total fetched record count for Medline object.

print-methods *Print method for EUtilsSummary object*

Description

Print object of class EUtilsSummary

Methods

signature(object = "EUtilsSummary") Query translation for EUtilsSummary object.

PublicationStatus *Extracts PublicationStatus from Medline object.*

Description

Extractor for the PublicationStatus of a Medline object.

Usage

```
PublicationStatus(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
PublicationStatus(myeloma)
```

PublicationStatus-methods

~~ *Methods for Function PublicationStatus in Package **RISmed***

Methods

```
signature(object = "Medline")
```

PublicationType *Extracts PublicationType from Medline object.*

Description

Extractor for the PublicationType of a Medline object.

Usage

```
PublicationType(object)
```

Arguments

object instance of class Medline

Value

list

See Also

[Medline](#)

Examples

```
data(myeloma)
PublicationType(myeloma)

Methods

```
signature(object = "Medline")
```

Query	<i>Extract Query from Medline object.</i>
-------	---

Description

Extractor for the translated Query of a Medline object.

Usage

```
Query(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)  
Query(myeloma)
```

Query-methods	<i>~~ Methods for Function Query in Package RISmed ~~</i>
---------------	--

Description

*~~ Methods for function Query in package **RISmed** ~~*

Methods

```
signature(object = "Medline")
```

QueryCount	<i>Count of record results for EUtilsQuery</i>
------------	--

Description

Returns the number of Ids from a E-utility query

Usage

QueryCount(object)

Arguments

object object of the EUtilsSummary class.

Value

numeric count

Author(s)

Stephanie Kovalchik

See Also

[EUtilsSummary](#)

QueryId	<i>Get ids from EUtilsQuery</i>
---------	---------------------------------

Description

Returns the vector Ids from a E-utility query

Usage

QueryId(object)

Arguments

object object of the EUtilsSummary class.

Value

character vector of ids

Author(s)

Stephanie Kovalchik

See Also

[EUtilsSummary](#)

QueryTranslation	<i>Get the NCBI query translation from EUtilsQuery</i>
------------------	--

Description

Returns the string translation of a E-utility query

Usage

QueryTranslation(object)

Arguments

object object of the EUtilsSummary class.

Value

character query translation

Author(s)

Stephanie Kovalchik

See Also

[EUtilsSummary](#)

show-Medline	<i>Show method for Medline object</i>
--------------	---------------------------------------

Description

Show object of class Medline

Methods

signature(object = "Medline") Query translation (if provided) and total fetched record count for Medline object.

show-methods	<i>Show method for EUtilsSummary object</i>
--------------	---

Description

Show object of class EUtilsSummary

Methods

signature(object = "EUtilsSummary") Query translation for EUtilsSummary object.

summary-methods	<i>Summary method for EUtilsSummary object</i>
-----------------	--

Description

Summary of object of class EUtilsSummary

Methods

signature(object = "EUtilsSummary", ...) Returns the number of records and id vector.

Title	<i>Extracts Title from Medline object.</i>
-------	--

Description

Extractor for the Title of a Medline object.

Usage

Title(object)

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
Title(myeloma)
```

Title-methods

~~ *Methods for Function Title in Package **RISmed*** ~~

Description

~~ Methods for function Title in package **RISmed** ~~

Methods

```
signature(object = "Medline")
```

Volume

Extracts Volume from Medline object.

Description

Extractor for the Volume of a Medline object.

Usage

```
Volume(object)
```

Arguments

object instance of class Medline

Value

vector

See Also

[Medline](#)

Examples

```
data(myeloma)
Volume(myeloma)
```

Volume-methods *~~ Methods for Function Volume in Package **RISmed** ~~*

Description

*~~ Methods for function Volume in package **RISmed** ~~*

Methods

signature(object = "Medline")

YearAccepted *Extracts YearAccepted from Medline object.*

Description

Extractor for the YearAccepted of a Medline object. This date corresponds to the date the article was accepted.

Usage

YearAccepted(object)

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

Methods

signature(object = "Medline")

YearArticleDate *Extracts YearArticleDate from Medline object.*

Description

Extractor for the YearArticleDate of a Medline object. This date corresponds to the date the article was ArticleDate.

Usage

```
YearArticleDate(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

Methods

signature(object = "Medline")

YearEntrez

Extracts YearEntrez from Medline object.

Description

Extractor for the YearEntrez of a Medline object. This date corresponds to the date the article was ArticleDate.

Usage

YearEntrez(object)

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

[Medline](#)

Examples

```
data(myeloma)

```

YearEntrez-methods *~~ Methods for Function YearEntrez in Package **RISmed** ~~*

Description

~~ Methods for function YearEntrez in package **RISmed** ~~

Methods

signature(object = "Medline")

YearEpublish *Extracts YearEpublish from Medline object.*

Description

Extractor for the YearEpublish of a Medline object. This date corresponds to the date the article was published online.

Usage

YearEpublish(object)

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

[Medline](#)

Examples

```

Methods

signature(object = "Medline")

YearPmc *Extracts YearPmc from Medline object.*

Description

Extractor for the YearPmc of a Medline object. This date corresponds to the date the article was made available through Pubmed Central.

Usage

```
YearPmc(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also

Methods

signature(object = "Medline")

YearPublish *Extracts YearPublish from Medline object.*

Description

Extractor for the YearPublish of a Medline object. This date corresponds to the date the article was published in print.

Usage

```
YearPublish(object)
```

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

Methods

signature(object = "Medline")

YearPubDate *Extracts YearPubDate from Medline object.*

Description

Extractor for the YearPubDate of a Medline object. This date corresponds to the date the article was PubDate.

Usage

YearPubDate(object)

Arguments

object instance of class Medline

Value

vector

References

<https://www.nlm.nih.gov/bsd/mms/medlineelements.html#phst>

See Also
